

Roger Still, Vice President, Mississippi River Initiative

The National Audubon Society

Roger leads the National Audubon Society's regional conservation effort focusing on the Mississippi River and its watershed. The goals of this ambitious effort are to protect and enhance at-risk bird populations and their habitats; to improve water quality; and to restore natural hydrology to sustain river functions and to reduce the loss of coastal wetlands in Louisiana.

Before taking his current position in January 2006, Roger was an Audubon Vice President and Executive Director of Audubon Missouri for five years. Prior to working for Audubon, Roger was the State Director of Missouri Chapter of the Nature Conservancy from 1996-2001. Under his leadership the Missouri Chapter received the "Outstanding Program Progress Award" in 1999 for the most improved operating unit within the entire organization.

Born in Lebanon, Missouri, a small Ozark town, Roger gained an appreciation for nature through playing and working on his grandparents' Ozark farms. He and his wife, Cherise, have two children, Brady, 17, and Abby, 7.
